UC004 · Clinical Knowledge Grounding Agent

Lab environment handout · Microsoft FDE Use-Case Pack · Wipro AI Academy · 24 Sep – 2 Oct 2026

> **Lab repository:** `https://github.com/Kiran-255666/msfde-uc004-healthcare-lab`
> Clone it to your VM, then copy `.env.example` to `.env` and fill in the values below.

1. Your `.env` file

Paste these lines into `.env`, replacing only `LAB_ALIAS` with your own lab username.

```
LAB_ALIAS=fdeuser7

PROJECT_ENDPOINT=https://msfde-uc004-foundry.services.ai.azure.com/api/projects/clinical-grounding
SEARCH_ENDPOINT=https://msfde-uc004-search.search.windows.net
STORAGE_ACCOUNT=msfdeuc004st
FOUNDRY_NAME=msfde-uc004-foundry
PROJECT_NAME=clinical-grounding
RESOURCE_GROUP=msfde_uc004
SUBSCRIPTION_ID=8eb50097-d089-40b4-8793-1a0e5932a826

SEARCH_API_VERSION=2026-08-01-preview
CORPUS_CONTAINER=corpus
CHAT_DEPLOYMENT=gpt-5.2
MINI_DEPLOYMENT=gpt-5.4-mini
EMBED_DEPLOYMENT=text-embedding-3-large
```

> **LAB_ALIAS must be unique.** Use your lab username (for example `fdeuser7`): 2–12 characters, lowercase letters and digits only. Everything you create — knowledge source, knowledge base, connection, agent and review table — is named from it. Do not change it part-way through the lab.

2. Environment at a glance

ITEM	VALUE
Subscription	Labs · `8eb50097-d089-40b4-8793-1a0e5932a826`
Resource group	`msfde_uc004` (Sweden Central)
Foundry resource / project	`msfde-uc004-foundry` / `clinical-grounding`
Azure AI Search	`msfde-uc004-search` (Standard S1)
Storage (corpus + review queue)	`msfdeuc004st`, container `corpus`
Models deployed	`gpt-5.2`, `gpt-5.4-mini`, `text-embedding-3-large`

Access group	`msfde-uc-participants` — grants Foundry User, Foundry Project Manager, Search Service Contributor, Search Index Data Contributor, Storage Blob Data Reader, Storage Table Data Contributor
Foundry portal	`https://ai.azure.com`

3. Sign in

```
az login --use-device-code
az account set --subscription 8eb50097-d089-40b4-8793-1a0e5932a826
az account show --query user.name -o tsv
```

Use the lab account from your credentials sheet. If you get a `403` from Azure AI Search or the Foundry project, your group membership has not propagated yet — wait a few minutes and run `az login` again.

4. Troubleshooting

SYMPTOM	WHAT TO DO
Missing required query parameter 'audience'	The project connection was updated instead of created. Just re-run `python step2_create_agent.py` — it deletes the connection first.
UnicodeEncodeError … charmap	Your console is not UTF-8. Run `setup-windows.ps1`, or in the current window run `chcp 65001`.

5. Clean up at the end

```
python step1_create_knowledge.py --delete
```

This frees the search index your knowledge source used. Leave your agent and connection in place.

Training environment. “Contoso Health System” and all CHS documents are fictional. The VA/DoD Clinical Practice Guidelines in the corpus are public-domain US federal publications. Nothing in this lab may be used for real patient care.
